

The Hi-Tech Travelling Raingun is a revolutionary new product that will change the way farmers irrigate their farms.

Not only can it achieve low application depths and rates, but it can also spread over large distances.

What's more, with no long boom areas to deal with they are easy to move around and set up.

BENEFITS

- Low application depths and rates
- No long boom arms to deal with
- Easy to move around
- Can do full or partial circles
- Can irrigate just on one side, great for sidling's or to avoid going too close to drains etc
- Can be used in a stationary position if required
- Far greater spread than normal travelling irrigators
- Can handle 9 - 44m³ per hour, if more volume is required it is simply a matter of changing the gun

TECHNICAL

Minimum application depth: 1mm

Minimum application rate: 4.2mm per hour

Wetter width 46 to 100 metres

Travel distance: up to 400 metres

Travel speeds: 1 - 7.5 metres per minute

Minimum PSI: 50

Maximum PSI: 120

FEATURES

- 3 speeds, plus can be used stationary
- Quality European made raingun
- Proven and unique drive unit
- Strong and rugged construction
- Wheels protected within the frame
- Fully galvanised frame
- Unique wire rope guide
- Drum can take up to 400m of wire rope
- Wheels and drum have bearings not nylon bushes
- Detailed performance chart and operating instructions available
- NZ Designed and Manufactured
